

Target Audience

Understanding the Primary Users of the Fitness App

Who are they?

- **Age:** 25–40 years
- **Occupation:** Office Professionals
- **Work Hours:** 9–10 hours/day
- **Location:** Urban & Metro Cities
- **Device:** Smartphone Users
- **Lifestyle:** Sedentary (Desk-based jobs)

Goals

- Stay healthy
- Reduce stress
- Exercise consistently
- Improve energy levels
- Maintain work-life balance
- Build healthy habits

Challenges

- No time for long workouts
- Busy work schedule
- Long sitting hours
- Back-to-back meetings
- Too tired after work
- Existing fitness apps feel overwhelming

Needs

- Quick 5–10 minute workouts
- Home & office exercises
- Personalized plans
- Daily reminders
- Easy-to-use interface
- Progress tracking

Design a simple fitness app that helps busy office professionals stay active through short, flexible, and personalized workouts that fit into their daily routine.

UX Research Summary

Research Summary

Problem Statement

Busy office professionals struggle to maintain a regular fitness routine due to long working hours, limited free time, and lack of motivation after work.

Key Findings

- Users have very limited time for exercise.
- Existing fitness apps often require long workout sessions.
- Users prefer short, flexible workouts that fit into their daily schedule.
- Mental well-being and stress reduction are as important as physical fitness.

Design Goal

Design a simple fitness application that enables busy professionals to stay active through quick, personalized, and accessible workouts.

Success Criteria

- Workouts under 10 minutes
- Easy navigation
- Personalized recommendations
- Daily reminders
- Progress tracking
